

## Scapa 3115

### Waterproof Cloth Tape UV Resistant

---

#### DESCRIPTION

Scapa 3115 is a high adhesion; polyethylene laminated waterproof cloth tape, coated with a pressure sensitive rubber adhesive. UV resistance, clean removal after 60 days outside. Scapa 3115 is available in white.

#### APPLICATIONS

- Polyethylene coated fabric for all uses in construction
- Suitable for various surfaces
- Exterior and indoor usage
- Used for sealing, bundling, masking and protecting
- Excellent for jointing polyethylene dust sheets

#### PRODUCT BENEFITS

- UV resistance
- Clean removal without residue after 60 days outside
- Strong polyethylene fabric tape
- Very good initial adhesion
- Good adhesion on flat and rough surfaces
- Good water resistance
- Excellent sealing property
- Easy tearing by hand
- Flexible and adaptable to different surfaces
- Good performance at low temperature

## TECHNICAL PROPERTIES

Technical Property	Nominal Value	Unit	Test Method
Temperature Resistance	-10 to +60	°C	-
Adhesion to Steel	7	N/cm	AFERA 5001
Elongation at Break	15	%	AFERA 5004
Tensile Strength	40	N/cm	AFERA 5004
Total Thickness	210	µm	AFERA 5006

## STANDARD PRESENTATIONS

- Branding: Scapa
- Packaging: Individual shrink with barcode label
- Core: 76mm
- Roll Length: 33m
- Roll Width: 48mm
- Colours: White

## RECOMMENDATIONS

The rolls must be stored flat in their original packaging, protected from dust, light, damp and solvent fumes at a temperature between 15°C and 25°C inclusive. In these conditions the storage time in a temperate climate must not exceed 12 months. Surfaces must be clean, dry and free from dust, grease, oil or any other contaminant. Due to the diversity of materials employed by the user, tests carried out by the user himself/herself before the final application is the surest way of testing the material.
